

# Strong conviction STABLE RETURNS

## OBI Active 6 –September 2018 Portfolio Update

### Investment Objective

This portfolio is NOT a risk-free portfolio, rather, it is suitable for a client who is prepared to invest into equities at the right time and is focused on both the risk and return and looking to achieve a balance. The portfolio is managed dynamically by altering the asset allocation using assets that carry market risk and using all assets that are available from the investment universe. The asset allocation in this portfolio will vary between a benchmark of 0% equity and 65% equity to achieve the portfolio objectives, provided economic conditions permit. The portfolio will be managed to try and limit the **indicative capital loss in any 12-month period to 12% in a significant event and 7% in normal market conditions** and to target an **annualised total return averaged out over a full economic cycle (5 – 7-year period) of 7% before any adviser, custodian, switch and/or discretionary investment management fees, but after fund manager charges.**

The benchmark we use for comparison purposes for volatility is **AFI Balanced** noting this benchmark currently **holds 67.76% in Equity (Analytics 1<sup>st</sup> September 2018)** and is therefore more aggressive than the model portfolio and does not have a capital preservation mandate. It would be expected therefore that the benchmark would outperform the model and that the volatility would be higher. The model performance therefore cannot be directly compared to the benchmark.

OBI Active 6 Performance – Source Analytics 1 <sup>st</sup> September 2018					
Asset	1 Month	3 Months	6 Months	12 Months	Since Launch (08/03/2016)

## Outlook & Positioning

The OBI Active 6 is the second of our balanced portfolios that is considered balanced with regards to the underlying asset allocation which can vary anywhere between 0% and 65% and as with all our portfolios balances the mandate between delivering the outcome and protecting capital. Global financial markets saw synchronised growth throughout 2017 with the US markets leading the way with strong company earnings, fundamentals and economic data. As we progress through 2018, it is apparent that volatility is back as investors remain cautious of the end of the cycle and take profits at each sell off, which exacerbates the drops and increases market volatility. Despite this, we are still seeing resilience in the markets, which is largely attributed to the current global deflation trend and the robust economic data generated throughout the speculative stage of the economic cycle. As global economic data continues to improve, markets are reaching record highs and investors are cautious after the volatility seen in February and are questioning how long the rally will last. This is not identifying anything serious at this juncture, however we are aware of the risks in the markets and have redesigned the portfolio based on our OBI strategy and have cyclically adjusted the portfolio and will maintain our conviction until the economic data suggests otherwise. We currently hold 9% in cash and will retain this position until we find a buying opportunity.

Our non-equity exposure is achieved through Absolute Return, Strategic & Corporate Bonds, High Yield and Multi Asset funds. In our February rebalance, we moved the portfolios to something that has lower market sensitivity, so the holdings are now measured using volatility-based equity and non-equity holdings. From an equity perspective, most of the asset allocation is achieved through a high exposure to globally managed funds with directional exposure to markets which we believe show upward growth. The remaining assets are held in globally diverse funds which will be tactically rotated by the underlying fund managers with a 20% directional asset allocation to UK and Europe. We will remain underweight UK until we see better data and stability in the underlying UK economy.

We are holding circa **52.35% in equities** which is still circa 15.41% less than the benchmark. We would expect this to fluctuate during 2018 as we take profits and only repurchase again following periods of volatility and falling valuations, in line with the mandate of the portfolio. Following this, we will rotate lesser performing assets from within the non-equity sector and add to our equity allocation.

Equity: 52.35% – Non-Equity: 47.66%
