

Strong conviction STABLE RETURNS

OBI Active 5 – December 2018 Portfolio Update

Investment Objective

This type of portfolio is NOT a risk-free portfolio, rather, it is suitable for a client who is prepared to invest into equities at the right time and is focused on both the risk and return and looking to achieve a balance. The portfolio is managed dynamically by altering the asset allocation using assets that carry market risk and using all assets that are available from the investment universe. The asset allocation in this portfolio will vary between a benchmark of 0% equity and 55% equity to achieve the portfolio objectives, provided economic conditions permit. The portfolio will be managed to try and limit the **indicative capital loss in any 12-month period to 10% in a significant event and 6% in normal market conditions** and to target an **annualised total return averaged out over a full economic cycle (5 – 7-year period) of 6% before any adviser, custodian, switch and/or discretionary investment management fees, but after fund manager charges.**

The benchmark we use for comparison purposes for volatility is **AFI Cautious** noting this benchmark currently holds **52.65% in Equity (Analytics 1st December 2018)** and is therefore more aggressive and has no capital preservation mandate. It would be expected therefore that the benchmark would outperform the model and that the volatility would be higher. The model performance therefore cannot be directly compared to the benchmark.

OBI Active 5 Performance – Source Analytics 1 st December 2018								
Asset	1 Month	3 Months	6 Months	12 Months	3 Years	5 Years	7 Years	Since Launch (16/02/2007)
OBI Active 5 Portfolio	-0.31%	-4.27%	-3.62%	-2.65%	15.21%	31.64%	60.97%	148.79%
Benchmark	0.62%	-3.97%	-3.18%	-1.09%	13.37%	25.25%	49.02%	54.50%

■ D	AFI Cautious TR in GB	7.03	6.12

Outlook & Positioning

The OBI Active 5 is the first of our balanced portfolios that is considered cautiously balanced with regards to the underlying asset allocation which can vary anywhere between 0% and 55% and as with all our portfolios, the mandate is balanced between delivering the outcome and protecting capital.

Global financial markets saw synchronised growth through 2017. Financial markets have been tested and unstable into 2018 which high risks in the equity markets. The US economy has been leading the way with synchronised growth and growth in 2018 with the US markets leading the way with strong company earnings, fundamentals and economic data. As we end 2018, it is apparent that volatility is back as investors remain cautious of the end of the cycle and take profits at each sell off, which exacerbates the drop. We have now taken a high cash strategy which is largely attributed to the high risks and volatility in the markets. As the global economic cycle continues, markets are reaching record highs and investors are cautious after the volatility seen in February and October. Market risks are high as global PMIs start slowing down and corporate earnings are reducing.

Our non-equity exposure is achieved through Absolute Return, Strategic & Corporate Bonds, High Yield and Multi Asset funds. In our recent rebalance, we moved the portfolios to something that has lower market sensitivity, so the holdings are now measured using volatility-based equity and non-equity holdings. From an equity perspective, most of the asset allocation is achieved through a high exposure to globally managed funds with directional exposure to markets which we believe show upward growth. The remaining assets are held in globally diverse funds which will be tactically rotated by the underlying fund managers with a small directional asset allocation to UK and Europe. We currently remain underweight in the UK until we see better data and stability in the underlying UK economy.

In terms of our equity allocation, we are holding circa 13.36% in equities which is circa 39.29% less than the benchmark. We would expect this to fluctuate during 2019 as we take profits and only repurchase again following periods of volatility and falling valuations, in line with the mandate of the portfolio. Following this, we will rotate lesser performing assets from within the non-equity sector and add to our equity allocation.

Equity: 13.36% – Non-Equity 86.64%
