## OBI Active 4 – May 2019 Portfolio Update

### Investment Objective

This portfolio is NOT a risk-free portfolio, rather, it is suitable for a client who is prepared to invest into a higher allocation towards equities than OBI Active 3. The portfolio is managed dynamically by altering the asset allocation and by predominantly using low-risk assets that carry low market risks and using all assets that are available from the investment universe. The asset allocation on this portfolio will vary between a benchmark of 0% equity and 45% equity on average to achieve the portfolio objectives, provided economic conditions permit. As non-equity assets are in some cases becoming riskier than equity assets, we feel that the current positioning is acceptable when we take into account our mandate regarding a client’s capital loss acceptance and by altering the asset allocation based on OBI and the ability to cyclically adjust the portfolios. The portfolio will be managed to try and limit the **indicative capital loss in any 12-month period to 8% in a significant event and 5% in normal market conditions** and to target **an annualised total return averaged out over an economic cycle (5 – 7 years) of 5% per annum before any adviser, custodian, switch and/or discretionary investment management fees, but after fund manager charges.**

The benchmark we use for comparison purposes for volatility is **AFI Cautious** noting this benchmark currently holds **51.08% in Equity (Analytics 1st May 2019)** and is therefore more aggressive and has no capital preservation mandate. It would be expected therefore that the benchmark would outperform the model and that the volatility of the benchmark would be higher. The model performance therefore cannot be directly compared to the benchmark.

## Outlook & Positioning

OBI Active 4 is a cautious portfolio with a slightly higher equity allocation than OBI Active 3, with the delivery of outcome and capital preservation at its core which aims to achieve a return outcome of 5% per annum.

In December last year, following a series of more negative economic data and a continuation of uncertainty over future trade and political movements, an in-depth analysis of the economic situation highlighted excessive risks in the global economy. This prompted us to act on the capital preservation mandate and position our portfolios defensively in preparation for difficult trading conditions over the first half of 2019. As it stands, portfolios are defensively positioned, with high cash levels as we await further clarity in markets.

Conditions over the first quarter of the year were extremely challenging, with markets regaining ground from last year's losses due to currency movements and speculation over US-China trade discussions despite an increasingly uncertain global economic outlook. In April, portfolios held steady and performed consistently as volatility continued and economic data worsened. Equity markets continued their upward trend over the month on speculation and momentum, however investor sentiment began to waiver, as evidenced by extremely low trading volumes as traditional market participants watched from the side-lines with high cash allocations. The economic data now suggests that we are in bear market, with high volatility and significant risks persisting in the global economy, resulting in declining yields in bond markets. Over the month, the portfolio performed relatively consistently, as expected in capital preservation mode.

Based on the indications of reduced spending and lower economic growth, it is likely that economic data will become more negative as Q2 of 2019 unfolds, as the performance of key lagging economic indicators and a continuation of trade tensions results in a selloff in equities. When this selloff happens, our defensive positioning allows us to protect against downside and reduce volatility while high cash levels allow us to capture upside as the market recovers. Providing we get the re-entry point right for reinvesting into equities, we remain optimistic about 2019 portfolio returns.

The portfolio has been constructed with a high level of diversification in terms of asset classes and geographies. In the December rebalance, we moved more defensively, therefore portfolios are currently constructed with a higher weighting of non-equity exposure due to risks facing equity markets. The low level of equity exposure within the portfolio is gained through exposure to diverse, globally managed multi-asset funds, and short equity positions which seek to benefit from a decline in markets. The portfolio currently holds a 14.13% equity exposure following the defensive repositioning, which is significantly lower than the benchmark. We would expect this to fluctuate over 2019 as we reinvest into equities, becoming more in line with the mandate of the portfolio as opportunities return.

\*Undisclosed asset sector represents the allocation to inverse ETFs and long/short equity assets which have been regarded here as non-equity due to their inverse relationship with equity markets.

Equity: 14.13% – Non-Equity: 85.87%
