

# Strong conviction STABLE RETURNS

## OBI Active 3 – January 2019 Portfolio Update

### Investment Objective

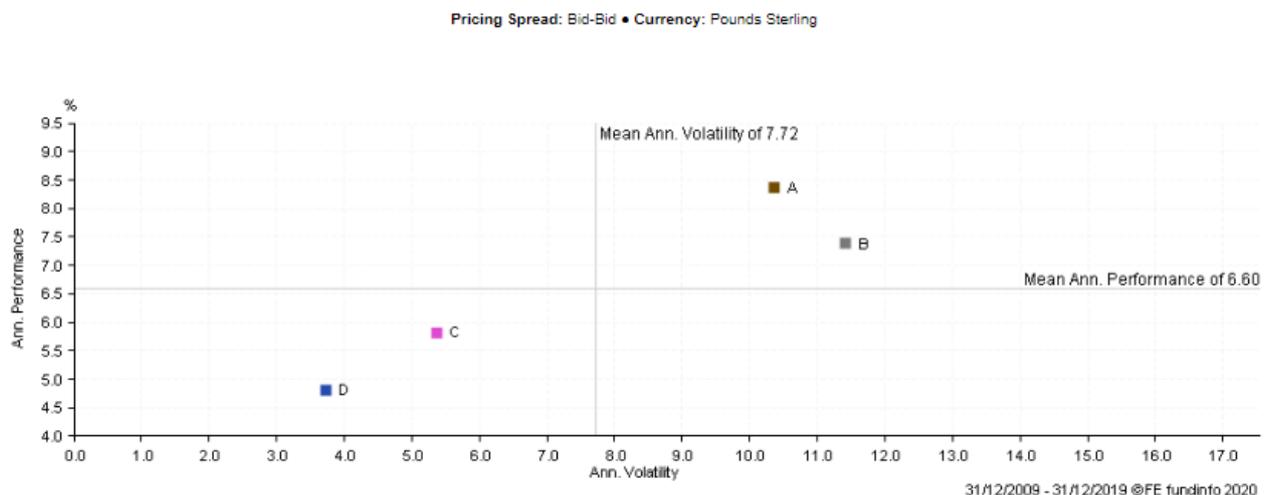

This portfolio is NOT a risk-free portfolio, rather, it is suitable for a client who requires stability of capital and is prepared to accept small levels of capital losses when markets are falling, based on the higher non-equity asset allocation. The portfolio is managed dynamically by altering the asset allocation and by predominantly using low-risk assets that carry market risk and using all assets that are available from the investment universe. The asset allocation in this portfolio will vary between a benchmark of 0% equity and 35% equity on average to achieve the portfolio objectives, provided economic conditions permit. The portfolio will be managed to try and limit the **indicative capital loss in any rolling 12-month period to 6% in a significant event and 4% in normal market conditions** and to target an **annualised total return averaged out over an economic cycle (usually 5 – 7 years) of 4% per annum before any adviser, custodian, switch and/or discretionary investment management fees, but after fund manager charges**. Despite the higher allocation in non-equity assets, these asset classes are in some cases becoming riskier than equity assets, however we feel that the current positioning is acceptable when we consider our mandate regarding a client’s capital loss acceptance.

The benchmark we use for comparison purposes for volatility is **AFI Cautious** noting this benchmark currently **holds 48.43% in Equity (Analytics 2<sup>nd</sup> January 2020)** and is therefore more aggressive than this portfolio and has no capital preservation mandate. It would be expected therefore that the benchmark would outperform the model and that the volatility of the benchmark would be higher. The model performance therefore cannot be directly compared to the benchmark.

## Outlook & Positioning

OBI Active 3 is a cautious portfolio with a higher non-equity allocation based on a low-risk mandate, with the delivery of outcome and capital preservation at its core which aims to achieve a return outcome of 4% per annum.

Following the implementation of capital preservation mode in December 2018 given increasing downside risks, portfolio performance remained relatively muted over the first half of 2019, owing to the barbell asset allocation approach within the portfolios. Moving into the second half of the year, after the Fed rate cut underwhelmed equity markets at the end of July, risk-off sentiment spread throughout financial markets, as a deterioration in the economic data and risk off sentiment in bond markets triggered recessionary concerns. As a result, the portfolios performed well, owing to their inverse correlation with equities and high non-equity, defensive asset exposure. Toward the end of 2019, after a second Fed rate cut in September, optimism over an interim US-China trade deal and fading concerns over a no-deal Brexit, risk on sentiment spread throughout the financial markets in the fourth quarter, with global equity markets regaining lost ground. As a result, the barbell approach, portfolio returns were relatively flat over the period. After challenging conditions for the majority of the year, portfolios performed well over December, owing to improving conditions on the removal of key risks and the strategic timing of the rebalance which added small cap exposure to the portfolios.

In the final quarter of 2019, equity markets were lifted by trade optimism and central bank stimulus in major economies, however the global economy remains in a fragile condition. As it stands, we are waiting to see whether bright spots observed in the data are temporary flashes of light against an otherwise bleak backdrop, or a more sustained improvement in the growth outlook. As a result, we maintain our defensive position as we are not yet convinced that the recent performance in the main (large cap) markets is sustainable given current valuations relative to earnings, and therefore on a risk-reward basis we do not see sufficient returns from this asset class in the near term. At the same time, we do see opportunities arising in other areas of the equity markets and therefore will continue to take advantage of these opportunities as they arise. In December, we added exposure to small cap UK, European and Global equities as part of our staged re-entry into equities, with particular potential in this area given recent underperformance and supportive conditions.

The portfolio has been constructed with a high level of diversification in terms of asset classes and geographies. The portfolio currently follows a defensive strategy, with a higher weighting of non-equity exposure due to risks facing equity markets, with bond exposure which performs particularly well during periods of weakness. The low level of equity exposure within the portfolio is gained through exposure to diverse, globally managed multi-asset funds, as well as a small position in UK, European and Global Smaller Companies, which will benefit from an increase in government spending after a period of prolonged trade and economic uncertainty as risks abate.

Equity: 20.14% – Non-Equity: 79.86%
