

OBI Model Portfolio Active 8

Objective

This portfolio is NOT a risk-free portfolio, rather, it is suitable for a client whose is prepared to invest into equities for most of the time and is focused more on the return than the risk, hoping that by doing this they can achieve greater long-term returns. The portfolio is managed dynamically by altering the asset allocation using assets that carry market risk and using all assets that are available from the investment universe. The asset allocation in this portfolio will vary between a benchmark of 0% equity and 85% equity to achieve the portfolio objectives, provided economic conditions permit. **The portfolio will be managed to try and limit the indicative capital loss in any 12-month period to 18% following a significant event and 9% in normal market conditions and to target an annualised total return averaged out over a full economic cycle (5 – 7 years) of 9% before any adviser, custodian, switch and/or discretionary investment management fees, but after fund manager charges.**

Management

The benchmark we use for comparison purposes for volatility is **AFI Balanced** noting that this benchmark currently holds **68.93% in Equity** (Analytics, 1st March 2021) and is therefore less aggressive than this portfolio. The benchmark also has no capital preservation mandate. It would therefore be expected that the model would outperform the benchmark and that the volatility of the model would be higher. The model performance therefore cannot be directly compared to the benchmark.

Performance

Asset	1 Month	3 Months	6 Months	12 Months	YTD	3 Years	5 Years	7 Years	Since Launch 08/03/2016
OBI Active 8 Portfolio	-1.89%	6.43%	14.98%	20.53%	0.66%	14.51%			41.77%

Equity 79.85% - Non-Equity 20.15%

Outcome Based Investing

At OCM, we believe that assets in a client portfolio should be adjusted through each phase of the economic cycle.

In line with the OBI strategy, at the extreme point when the cycle is at its most extended and the economies are overheating, it is our view that by moving defensively and focusing on the core portfolio assets, we are able to provide the desired outcome with the least amount of expected volatility.

The key with the strategy of “Outcome Based Investing” is to limit the surprises and capture as much of the upside as possible, with a focus on delivering the client’s strategised outcome.

Key Facts

Benchmark
AFI Balanced

Our OBI Active 8 portfolio is our most aggressive portfolio which is still considered balanced, with the delivery of outcome and capital preservation at its core which aims to achieve a return outcome of 9% per annum.

Market Outlook

Despite some volatility throughout January, global equity markets started the year on strong footing, with risk assets experiencing a boost on an improving earnings outlook owing to mounting evidence of strong progress being made on the vaccination front. Although market conditions remain fragile through the first half of the year, the progress of vaccine distribution programmes in the US and UK have strengthened expectations of a robust economic recovery upon the release of pent-up demand, giving rise to increased inflation expectations as the year progresses. Investors have baked in expectations of elevated inflation this year, seen in the acceleration in government bond yields over the month, which has caused market participants to speculate about a sooner-than-expected rise in interest rates. This, in turn, has driven the outperformance of value versus growth stocks over February, albeit the outlook for both remains positive for 2021. Despite this, the inflationary pressures are likely to be transitory rather than permanent, suggesting the market has overreacted through the latest growth asset selloff. Market volatility is likely to remain high as early cycle dynamics unfold, however central banks are expected to maintain the same accommodative stance that they have outlined in recent meetings, with monetary policy expected to remain loose, and favourable financial conditions to remain in place.

As long-term investors, we view the recent market movements and events as short-term noise, with no changes to our underlying assumptions on global recovery, and market outlook. It remains our view that we will observe a recovery in activity in the months ahead, with accelerating vaccine rollouts allowing business and economic activity to return as lockdown restrictions ease. Looking further ahead, although it is clear that volatility remains in the short-term, we remain optimistic and continue to see opportunities arising as the outlook improves, with global growth remaining well supported by governments and central banks.

Portfolio Positioning

The portfolio has been constructed with a high level of diversification in terms of asset classes and geographies, with a mix of bond, equity, and property exposure to meet portfolio objectives over the long term. The exposure is gained through a high-quality mix of actively managed and passive, globally diverse equity and multi asset funds. Over the month, the portfolio benefitted from its diverse asset allocation, while a focus on active bond management helped to add value to the portfolio, capitalising on a continuation in key trends and rotations identified towards the end of 2020. While we expect to see further volatility in the short term, we remain content with our positioning, and we remain well placed to benefit from an improvement in economic fundamentals over the year.

Portfolio Volatility

This scatter chart reflects annualised volatility and return in GBP over the past 4 years. Over the long term, we would expect the OBI portfolio to exhibit a lower level of volatility than the benchmark.

Key	Name	Annualised Performance	Annualised Volatility
A	OBI Active 8 - Feb 2021 TR in GB	5.81	8.53
B	AFI Balanced TR in GB	5.46	10.66
C	UK Pav UK Gilts TR in GB	2.07	6.21
D	UK Pav UK Equities TR in GB	1.88	15.05

Important Information

All data in this document has been extracted from Analytics as at 1st March 2021. Past performance cannot be used as a guide to future performance and the value of your investment will fall as well as rise in value. You may not get back all of your investment and the final value of your investment will depend on the performance of your portfolio. Performance figures quoted include fund manager charges but exclude adviser, discretionary, custodian and switch charges. Unless stated, income is reinvested into the portfolio. The information contained in this document is for information purposes only. It does not constitute advice or a recommendation or an offer or solicitation for investment. Portfolio Expense is based on the Fusion platform and may vary for other platforms.
