

# LHX Aggressive Long Hold

## Objective

This portfolio is NOT a risk-free portfolio, rather, it is suitable for a client who is prepared to accept capital losses when markets are falling, based on a high equity asset allocation. The portfolio has been constructed based on a long-term investment horizon with a long hold investment strategy. The portfolio is therefore suitable for clients with a long-term investment horizon who prefer to remain fully invested throughout the market cycle and are comfortable with high levels of volatility. The asset allocation in this portfolio will vary between a benchmark of 70% equity and 80% equity on average to achieve the portfolio objectives. **Due to the long-hold nature of the portfolio, the indicative capital loss in any rolling 12-month period is not limited, however the portfolio is expected to return an annualised total return averaged out over an economic cycle (usually 5 – 7 years) of 9% per annum before any adviser, custodian, switch and/or discretionary investment management fees, but after fund manager charges.**

## Management

The benchmark we use for comparison purposes for volatility is **AFI Aggressive**, noting that this benchmark currently holds **89.27% in Equity** (Analytics, 1st November 2021) and is therefore more aggressive than this portfolio. It would therefore be expected that this benchmark would outperform the model and that the volatility of the benchmark would be higher. The model performance therefore cannot be directly compared to the benchmark.

## Long Hold Investing

The assets in this portfolio have been selected based on a long hold approach, with a recommended minimum investment horizon of 5 years. Unlike OCM's OBI proposition, the asset allocation within this portfolio will remain consistent over the long term, with low portfolio turnover.

In line with the Long Hold strategy, the general asset allocation within the portfolio will be maintained over the long term, however underlying funds may be switched at the discretion of the Investment Committee in cases of consistent underperformance or positioning shifts.

LHX Aggressive is a long hold portfolio with a low non-equity allocation based on a high-risk mandate, with the delivery of outcome at its core which aims to achieve an annualised return outcome of 9% per annum.

## Market Outlook

Following a strong performance in the first half of 2021, financial markets became increasingly turbulent towards the end of the third quarter, with decelerating global growth, policy speculation, mixed economic data flows and idiosyncratic events contributing to September's risk-off sentiment. This risk-off sentiment continued into October, a historically volatile month for equities, resulting in a 5% pullback in equity markets. Since this healthy price correction, we have witnessed equity market prices begin to improve, driven by a broadly positive third-quarter earnings season and the progression of President Biden's new social spending framework. While the recovery in risk asset prices over recent weeks is welcoming, we are cautious of financial market conditions in the short term, given the more hawkish tone taken by central banks as inflationary pressures surpass policymaker expectations. As a result, investors anticipate that November's monetary policy decisions from the Bank of England and the Federal Reserve could hold important implications for financial markets.

While the medium to long term outlook remains positive, we expect policy movements, the impact of supply chain issues and a slowing pace of recovery to contribute to uncertainty in the short term. Looking beyond November, we expect risk assets to recover towards the end of 2021 and beyond. Consequently, we will continue to watch incoming data and market sentiment closely to capitalise on attractive opportunities as short-term clarity improves.

## Portfolio Positioning

While risks remain, our high-level of portfolio diversification in terms of asset classes and geographies has helped to navigate excess market volatility and enhanced portfolio performance over the past three months, benefitting from the ongoing economic recovery. The portfolios are currently exceeding their annualised return targets and, given favourable macroeconomic tailwinds at this stage of the cycle, we remain confident that we can continue to drive portfolio outperformance through strong fund selection. As certain regions begin the early phase of the mid-economic cycle, we are considering a number of changes to the OBI portfolios at our upcoming Investment Committee Meeting in September, to reposition the portfolio as we move into the next stage of the cycle.

## Portfolio Volatility

This scatter chart reflects annualised volatility and return in GBP over the past 3 years. Over the long term, we would expect the LHX portfolio to exhibit a lower level of volatility than the benchmark.
