

LHX Cautious Long Hold

Objective

This portfolio is NOT a risk-free portfolio, rather, it is suitable for a client who is prepared to accept capital losses when markets are falling, based on a cautious asset allocation. The portfolio has been constructed based on a long-term investment horizon with a long hold investment strategy. The portfolio is therefore suitable for clients with a long-term investment horizon who prefer to remain fully invested throughout the market cycle and are comfortable with high levels of volatility. The asset allocation in this portfolio will vary between a benchmark of 30% equity and 45% equity on average to achieve the portfolio objectives. **Due to the long hold nature of the portfolio, the indicative capital loss in any rolling 12-month period is not limited, however the portfolio is expected to return an annualised total return averaged out over an economic cycle of 5% per annum before any adviser, custodian, switch and/or discretionary investment management fees, but after fund manager charges.** Despite the higher allocation in non-equity assets, these asset classes are in some cases becoming riskier than equity assets, however we feel that the current positioning is acceptable when we consider our mandate regarding a client's risk tolerance.

Management

The benchmark we use for comparison purposes for volatility is **AFI Cautious**. The benchmark currently holds **50.49% in Equity** (Analytics, 1st October 2023) and is therefore more aggressive than this portfolio in terms of the equity/non-equity split. It would therefore be expected that this benchmark would outperform the model and that the volatility of the benchmark would be higher. The model therefore cannot be directly compared to the benchmark.

Long Hold Investing

The assets in this portfolio have been selected based on a long hold approach, with a recommended minimum Investment horizon of 5 years. Unlike OCM's OBI proposition, the asset allocation within this portfolio will remain consistent over the long term, with low portfolio turnover.

In line with the Long Hold strategy, the general asset allocation within the portfolio will be maintained over the long term, however underlying funds may be switched at the discretion of the Investment Committee in cases of consistent underperformance or positioning shifts.

LHX Cautious is a long hold cautious portfolio with a higher non-equity allocation based on a lower-risk mandate, with the delivery of outcome at its core which aims to achieve an annualised return outcome of 5% per annum.

Market Outlook

Throughout September, investor sentiment fluctuated between optimism that central banks had largely reached their expected peak interest rates and a more cautious view that rising oil prices may weigh on inflationary pressures, meaning rates may need to stay higher for longer. Several interest rate decisions throughout the month, led to further volatility as investors looked for clues on future policy, however whilst the ECB signalled a future pause, and the Fed and Bank of England leaving rates unchanged, an outlook of higher for longer rates weighed on risk appetite.

As we move into the final quarter of the year, we remain somewhat cautious towards equities ahead of upcoming corporate earnings. With equity markets cooling over the month, we believe that there remains a high level of optimism priced into valuations and therefore expect some further weakness moving into the end of the year, with corporate earnings expected to show a weakening of profitability. Although we expect upside potential in equities to be limited in the near-term, it is our view that there remains well positioned, attractively priced areas of the market, particular in more defensive sectors where resilient balance sheets provide both a strong dividend yield and resilience to rising interest rates. Over the longer-term, we believe any equity weakness presents us the opportunity to increase our exposure at more attractive prices, which we believe can drive positive portfolio returns throughout 2024 as macro headwinds continue to ease.

Portfolio Positioning

Following the changes to positioning made earlier in the year, the LHX portfolios hold a diversified exposure towards equities, bonds, property assets, and in the lower risk portfolios, money market assets. With a focus on quality and yield, we expect this allocation to remain resilient during periods of near-term volatility whilst taking advantage of higher yields available following the normalisation of interest rates over the last 18 months. We have retained a slight growth bias, given that we still expect these assets to outperform over the full market cycle, however it is our view that this more diverse allocation will help the portfolio remain resilient against what we expect to be a more volatile market environment moving forward.

Portfolio Volatility

This scatter chart reflects annualised volatility and return in GBP over the past 5 years. Over the long term, we would expect the LHX portfolio to exhibit a lower level of volatility than the benchmark.

Key	Name	Annualised Performance	Annualised Volatility
A	UK Psv UK Equities TR in GB	3.27	14.69
B	LHX Cautious Portfolio (to be phased out) TR in GB	3.24	7.81
C	AFI Cautious TR in GB	1.59	9.21
D	UK Psv UK Gilts TR in GB	-3.71	8.72

Important Information

All data in this document has been extracted from Analytics as at 1st October 2023. Past performance cannot be used as a guide to future performance and the value of your investment will fall as well as rise in value. You may not get back all of your investment and the final value of your investment will depend on the performance of your portfolio. Performance figures quoted include fund manager charges but exclude adviser, discretionary, custodian and switch charges. Unless stated, income is reinvested into the portfolio.
